ABOUT US

- We HOMEVAC technologies is committed to manufacture and supply world class central vacuum systems, that will help you to vacuum all the dust particles inside your home and make all of our living in a clean, safe and healthier environment.
- We have more than 30 years of Experience in Industrial Vacuum Cleaning Industry.
- First Indian manufacturer to manufacture Three phase central vacuum system for homes, which are suitable for Indian dust Environments.

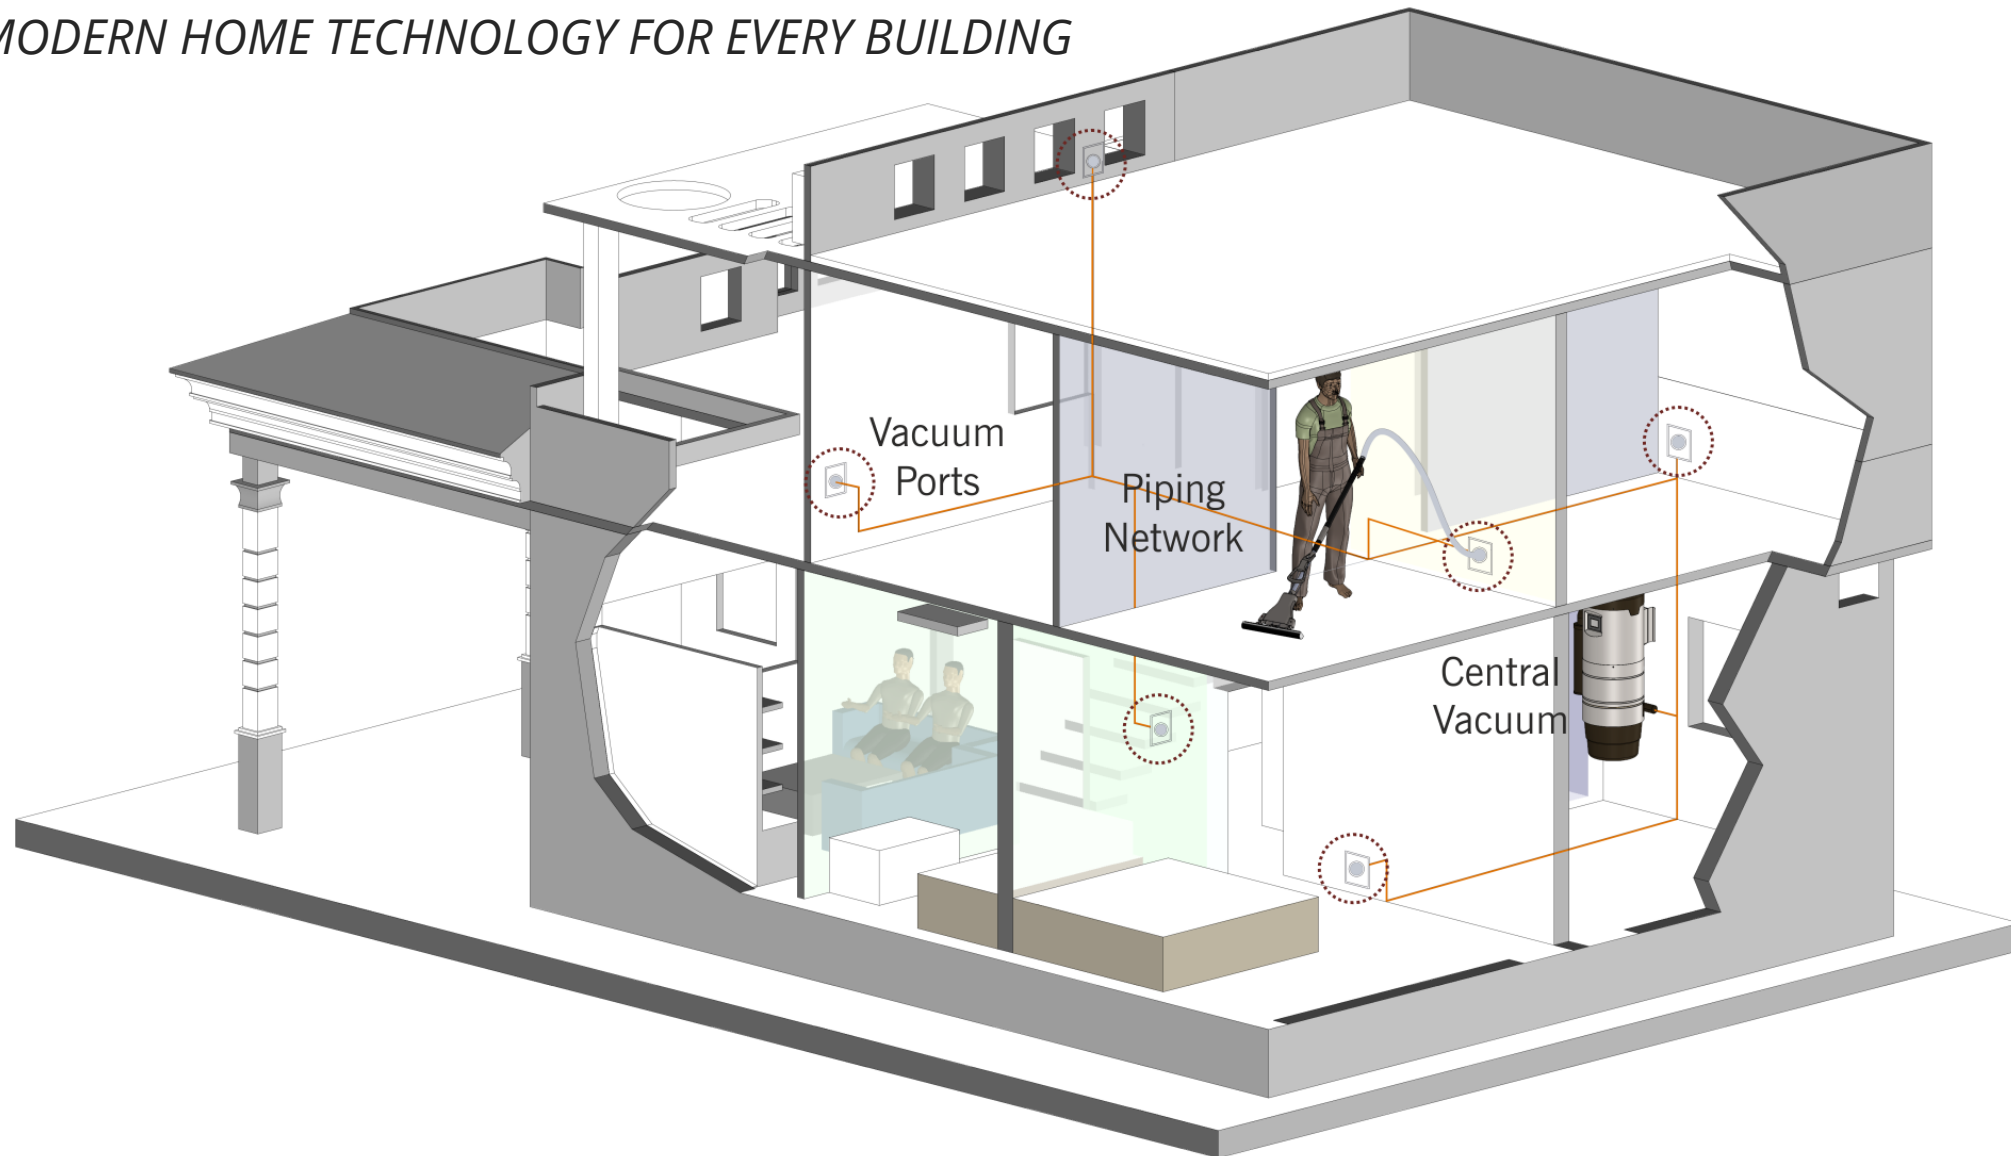

WHAT IS CENTRAL VACUUM SYSTEM

A Central Vacuum System is a modern integrated solution consisting of 3 main elements.

1. A Vacuum Suction Device installed permanently into a building's garage, power room, storage room or any other rooms away from the living area which provides the suction power required to vacuum dust, dirt and any other waste.
2. A series of Vacuum Pipes concealed in the walls which are designed to move the dirt to the collection tank of the vacuum suction device typically installed in a utility area.
3. Vacuum Inlet Ports, Vacuum Pan Ports and Vacuum Retractable Hoses which are installed in walls throughout the building and are the primary dirt pick up/collection devices.

CENTRALIZED VACUUM CONCEPT

MODERN HOME TECHNOLOGY FOR EVERY BUILDING

WHY CENTRAL VACUUM SYSTEM

- Common cleaning technics like sweeping / brooming will only display's the dust particle from one place to another, from floor's to sofas, floor mats to curtains, showcases to rack's etc. The solution for this is to vacuum the dust particle and stored it in a bin.
- Again traditional vacuum cleaners has their own disadvantages, setting up time is high, want to carry all the way, plugging and unplugging is a problem, Safety issue because of the live wires, Wires will get tangled, dust can get expelled etc. So the best solution to clean and make the living space healthier is by Central vacuum system.

WHY CENTRAL VACUUM SYSTEM

Keeping your home clean is an everyday task. As availability of domestic help to clean your homes get more difficult and expensive, it is time to implement a cleaning system which requires less man power and cleans better.

Central Vacuum Systems from HOMEVAC make your home a truly dust free environment. It is less time consuming when compared to using domestic vacuum cleaners or using domestic help and delivers a deeper, more efficient cleaning.

CENTRAL VACUUM SYSTEM

- Most service requirements too can be fixed by connecting via the internet.

TYPES OF VACUUM PORTS

VACUUM RETRACTABLE HOSE | INLET PORTS | VACUUM PAN

VACUUM RETRACTABLE HOSE (VRH)

The VRH system is a long retractable hose concealed inside the vacuum pipes which can be pulled out when you are cleaning and disappears back into your wall when you are done.

INLET PORTS

Vacuum Inlet Ports are placed on walls across your home. All you need to do is plug the hose into the port. The Vacuuming starts automatically when the hose is plugged in and switches off when the hose is un-plugged.

VACUUM PAN

Floor Vacuum Pan Ports are installed at floor level at certain locations in your home. You can switch on this Port with a gentle tap of your feet. It is typically used in the Kitchen and any other location where waste can be swept directly into the floor port.

FOR CLEAN AND HEALTHY HOME

CLEANS WET & DRY DUSTS EFFICIENTLY

CLEAN CURTAINS EASILY AND PROFICIENTLY

FOR CLEAN AND HEALTHY HOME

PERFECT FOR CLEANING STAIRS
